

Bluebell Creeper (*Billardiera heterophylla*) is a large vigorous creeper from WA and is rapidly spreading across our local area.

**Bluebell Creeper is a very invasive plant that outcompetes native vegetation.** Its seeds are spread by birds and kangaroos.

We are the Coromandel East Biodiversity Action Group, a recently formed group of landowners with a common passion for the protection of the rare remnant scrub in our area. This group came together due to the rapid spread of Bluebell Creeper (*Billardiera heterophylla*) across our land.

We would love to welcome new members into the group. Alternatively we would be happy to offer some guidance if you are keen to remove weeds from your property in Coromandel East. Please get in touch with Della or Nick to learn more.
